

THE LAUNCH OF THE NEW COMPRESSOR SYSTEMS

Nitrox Solutions, Lauderdale Diver and Moondog Dive Outfitters combined resources in 2007 to promote to our yacht based clients a premier full service, one stop shop for all your underwater needs.

The three companies formed this strategic partnership to bring the "Water Cooled" Compressor technology to the yachting market and provide customers with safe, reliable, cost effective gas production systems, as well as providing service and support to the yacht market.

The **Nitrox Solutions** gas production systems are mounted in an open frame configuration to allow ease of serviceability to the systems components. At no additional cost we can construct the systems in a horizontal or vertical configuration. If a fully enclosed system is desired, a cabinet style configuration can be easily achieved at an additional cost to the vessel. Cosmetic features are simple upgrades. We will be glad to work with engineering to achieve whatever packaging is desired.

Our two man install team, consisting of Greg Mooney and Bob Olson, will plumb the components, complete the run up, and train the vessel's personnel in the operation and servicing of the compressor system upon installation. Certification of the vessels crew in Nitrox Diving and Nitrox Blending can be achieved during the install period if desired. All certifications are internationally accredited and recognized.

All **Nitrox Solutions** compressor systems are constructed to be **Lloyds compliant**. Specific classification requirements can be made upon request.

Apart from our excellent customer service and vast knowledge and experience in this field our proven water cooled compressors bring the newest, most innovative technology to the yachting industry.

Customers can contact any company and ensure you have sales, service and support for all your underwater needs including: Air and Nitrox compressor systems, recompression chambers, rebreathers, mini-submarines and scuba equipment.
